SUBJECT INDEX

Aerial infrared surveys for residential applications, field evaluation of, 28
Aerial thermographic data, interpretation of, 12
Aerial thermography, quantitative methods in, 20
Air flow patterns, use of infrared absorbing gas in illustrating diffuser, 153
Air leakage using thermography, different methods for evaluating, 64
American Society of Heating, Refrigeration, and Air Conditioning Engineers (ASHRAE) Thermographic Standard 101P, 94
American Society for Testing and Materials (ASTM) practice on thermographic inspections of wood frame buildings, progress on, 99
(ASHRAE) Thermographic Standard 101P, American Society of Heating, Refrigeration, and Air Conditioning Engineers, 94
(ASTM) practice on thermographic inspections of wood frame buildings, progress on American Society for Testing and Materials, 99
Audit technique, new low-cost residential energy, 35
Austria, thermographic inspection of buildings in, 45
Building performance diagnostics, minimum resolvable temperature difference testing: equipment specification for, 102
Building thermographic personnel, training, 85
Buildings in Austria, thermographic inspection of, 45
Buildings, progress on American Society for Testing and Materials (ASTM) practice on thermographic inspections of wood frame, 99
Buildings in West Allis, Wisconsin, mobile ground-based infrared heat loss survey of 25,000, 50
Built-up roofing systems, detection of moisture in commercial and industrial, 114

Camera systems: status and capabilities, pyroelectric vidicon, 184
Canada—Regional Thermographic Project, Public Works, 129
Commercial and industrial built-up roofing systems, detection of moisture in, 114
Comparative analysis of infrared contractors: retrofit insulation quality control inspections performed on residential buildings, 80

Comparison of the effectiveness of energy audits with and without thermography, 61
Connections by infrared thermography, inspection of underground secondary, 233
Contractors: retrofit insulation quality control inspections performed on residential buildings, comparative analysis of infrared, 80
Cooled sensors for thermographic instruments, thermoelectric, 190

Detection of moisture in commercial and industrial built-up roofing systems, 114
Diagnostic centers, thermography and, 238
Diagnostics, minimum resolvable temperature difference testing: equipment specification for building performance, 102
Different methods for evaluating air leakage using thermography, 64
Diffuser air flow patterns, use of infrared absorbing gas in illustrating, 153
Digital image processing for thermogram interpretation, 169
Direct radiometric estimates of heat flow and thermal resistance using spot radiometers, 177

Emissivity, we need to know more about infrared, 119
Energy audit technique, new low-cost residential, 35
Energy audits with and without thermography, comparison of the effectiveness of, 61
Energy Conservation and Development Program, The Holyoke Industrial, 226
Energy conservation in industrial plants, importance of thermography for preventive maintenance and, 230
Energy program, use of a mobile infrared line scanner in the Plymouth Michigan residential, 71
Equipment specification for building performance diagnostics, minimum resolvable temperature difference (MRTD) testing:, 102
Evolution of forward looking infrared, 166

Field evaluation of aerial infrared surveys for residential applications, 28
Forward looking infrared, evolution of, 166

Gas in illustrating diffuser air flow patterns, use of infrared absorbing, 153

Heat flow and thermal resistance using spot radiometers, direct radiometric estimates of, 177
Heat loss—a case study for development of methodology, remote sensing of building, 139
Heat loss survey of 25,000 buildings in West Allis, Wisconsin, mobile ground-based infrared, 50
Heat loss using thermography, recent advances in the quantification of industrial, 213
Holyoke Industrial Energy Conservation and Development Program, the, 226

Image processing for thermogram interpretation, digital, 169
Importance of infrared thermography in residential applications, 68
Importance of thermography for preventive maintenance and energy conservation in industrial plants, 230
Industrial built-up roofing systems, detection of moisture in commercial and, 114
Industrial Energy Conservation and Development Program, The Holyoke, 226
Industrial heat loss using thermography, recent advances in the quantification of, 213
Industrial plants, importance of thermography for preventive maintenance and energy conservation in, 230
Infrared absorbing gas in illustrating diffuser air flow patterns, use of, 153
Infrared contractors: retrofit insulation quality control inspections performed on residential buildings, comparative analysis of, 80
Infrared emissivity, we need to know more about, 119
Infrared, evolution of forward looking, 166
Infrared heat loss survey of 25,000 buildings in West Allis, Wisconsin, mobile ground-based, 50
Infrared line scanner in the Plymouth, Michigan residential energy program, use of a mobile, 71
Infrared measurements, meterology and, 9
Infrared surveys for residential applications, field evaluation of aerial, 28
Infrared thermal sensing and how we use it, 2
Infrared thermography, inspection of underground secondary connections by, 233
Infrared thermography in residential applications, importance of, 68
Infrared thermography in the Low-Cost Solar Array Program, uses of, 219
Inspection of underground secondary connections by infrared thermography, 233
Insulation quality control inspections performed on residential buildings, comparative analysis of infrared contractors: retrofit, 80
Interpolating R-values from thermograms, 157
Interpretation of aerial thermographic data, 12

Line scanner in the Plymouth, Michigan residential energy program, use of a mobile infrared, 71
Low-cost residential energy audit technique, new, 35

Meteorology and infrared measurements, 9
Methodology, remote sensing of building heat loss—a case study for development of, 139
Michigan residential energy program, use of a mobile infrared line scanner in the Plymouth, 71
Minimum resolvable temperature difference testing: equipment specification for building performance diagnostics, 102
Mobile ground-based infrared heat loss survey of 25,000 buildings in West Allis, Wisconsin, 50
Mobile infrared line scanner in the Plymouth, Michigan residential energy program, use of a, 71
Moisture in commercial and industrial built-up roofing systems, detection of, 114

New low-cost residential energy audit technique, 35

Plymouth, Michigan residential energy program, use of a mobile infrared line scanner in the, 71
Practical methods for improving thermal measurements, 204
Preventive maintenance and energy conservation in industrial plants, importance of thermography for, 230
Progress on American Society for Testing and Materials (ASTM) practice on thermographic inspections of wood frame buildings, 99
Public Works Canada—Regional Thermographic Project, 129
Pyroelectric vidicon camera systems: status and capabilities, 184

Quality control inspections performed on residential buildings, comparative analysis of infrared contractors: retrofit insulation, 80
Quantification of industrial heat loss using thermography, recent advances in the, 213
Quantitative methods in aerial thermography, 20

R-values from thermograms, interpolating, 157
Radiometers, direct radiometric estimates of heat flow and thermal resistance using spot, 177
Radiometric estimates of heat flow and thermal resistance using spot radiometers, direct, 177
Recent advances in the quantification of industrial heat loss using thermography, 213
Regional Thermographic Project, Public Works Canada—, 129
Remote sensing of building heat loss—a case study for development of methodology, 139
Residential applications, field evaluation of aerial infrared surveys for, 28
Residential applications, importance of infrared thermography in, 68
Residential buildings, comparative analysis of infrared contractors: retrofit insulation quality control inspections performed on, 80
Residential energy audit technique, new low-cost, 35

Residential energy program, use of a mobile infrared line scanner in the Plymouth, Michigan, 71
Roofing systems, detection of moisture in commercial and industrial built-up, 114

Scanner in the Plymouth, Michigan residential energy program, use a mobile infrared line, 71
Sensing and how we use it, infrared thermal, 2
Sensors for thermographic instruments, thermoelectric cooled, 190
Solar Array Program, uses of infrared thermography in the Low-Cost, 219
Spot radiometers, direct radiometric estimates of heat flow and thermal resistance using, 177

Temperature difference testing: equipment specification for building performance diagnostics, minimum resolvable, 102
Thermal measurements, practical methods for improving, 204
Thermal resistance using spot radiometers, direct radiometric estimates of heat flow and, 177
Thermal sensing and how we use it, infrared, 2
Thermoelectric cooled sensors for thermographic instruments, 190
Thermogram interpretation, digital image processing for, 169
Thermograms, interpolating R-values from, 157
Thermographic data, interpretation of aerial, 12
Thermographic inspection of buildings in Austria, 45
Thermographic inspections of wood frame buildings, progress on American Society for Testing and Materials (ASTM) practice on, 99
Thermographic instruments, thermoelectric cooled sensors for, 190
Thermographic personnel, training building, 85
Thermographic Project, Public Works Canada—Regional, 129
Thermographic Standard 101P, American Society of Heating, Refrigeration, and Air Conditioning Engineers (ASHRAE), 94
Thermography, comparison of the effectiveness of energy audits with and without, 61
Thermography and diagnostic centers, 238
Thermography, different methods for evaluating air leakage using, 64
Thermography, inspection of underground secondary connections by infrared, 233
Thermography in the Low-Cost Solar Array Program, uses of infrared, 219
Thermography for preventive maintenance and energy conservation in industrial plants, importance of, 230
Thermography, quantitative methods in aerial, 20
Thermography, recent advances in the quantification of industrial heat loss using, 213
Thermography in residential applications, importance of infrared, 68
Training building thermographic personnel, 85

Underground secondary connections by infrared thermography, inspection of, 233
Use of infrared absorbing gas in illustrating diffuser air flow patterns, 153
Use of a mobile infrared line scanner in the Plymouth, Michigan residential, 71
Uses of infrared thermography in the Low-Cost solar Array Program, 219

Vidicon camera systems: status and capabilities, pyroelectric, 184

We need to know more about infrared emissivity, 119
West Allis, Wisconsin, mobile ground-based infrared heat loss survey of 25,000 buildings in, 50
Wisconsin, mobile ground-based infrared heat loss survey of 25,000 buildings in West Allis, 50
Wood frame buildings, progress on American Society for Testing and Materials (ASTM) practice on thermographic inspections of, 99
